

FLUID MANAGEMENT

High speed color changes
Maintains paint lines
Reduces product waste
Constant Circulation

FLUID MANAGEMENT

The system is designed to have efficient coating change times, that can average 1minute 30 seconds. The system automatically flushes paint lines between coating choices with 3 selectable flush intensities(this also guarantees that fluid lines are flushed thoroughly). **Some savings recorded averaged 1 pint of waste versus the 3 gallons it could take to do manually.** Waste would be collected into a 55 gallon drum behind the equipment. The compact constant circulating modules can handle low/high pressures. Recipes can be stored within the HMI, options for digital fluid regulation exist as well making for efficient and repeatable use.

REMOTE PUMP STANDS

Remote Pump Stands are designed to use space efficiently, making the environment easier to maintain cleanliness. Remote solvent stations are also created to eliminate the need to carry/cart solvents throughout the work place, transporting fluid valve via Stainless steel tubing. One pump will eliminate the use of multiple pumps.

Proudly Canadian. North American driven.
