

SERVICES

FINISHING CONSULTING

Finishing process audit, equipment and coating analysis and recommendations, surface preparation, product handling and orientation, fluid delivery and application equipment optimization, operator and maintenance personnel training, development of standard operating procedures, quality assurance procedure development, material handling, storage and waste disposal, fluid and air line layout and design, paint kitchen design, preventative maintenance, troubleshooting and repair, and complete finishing system layout and design.

REFURBISHMENT/UPGRADE EQUIPMENT

Our quality standards are high and will not be compromised. We will bring equipment back to OEM specifications or beyond (as is most cases). Upgrades can also be made, removing obsolete controls for more modern touch screen HMI's. Integrating fluid controls, temperature sensors, remote monitoring, web video monitoring, ect. Anything is possible.

CUSTOM EQUIPMENT SOLUTIONS

Is there an application you have that you need a special piece of equipment? Our engineers are capable of designing stream lined equipment to suit your needs.

Proudly Canadian. North American driven.
